Roller Shutter Manufacture and Installation

## Armourshield Roller Shutter

## White Hart Lane, London with Armourshield

As part of the one billion pound development of the new Tottenham Hotspurs stadium, London the local council and Football club have put money into the local immediate area to carry out a regeneration of the area and bring the local facilities up to the same standard as the new stadium.

As part of this, stations, schools and retail establishments have all been upgraded. We are proud that our armourshield roller shutter was chosen as part of this regeneration and has been used on a number of retail outlets in and around the stadium.

Armourshield shutters offer style with security and have also been used on other projects and regeneration schemes such as Walthamstow High Street and the more recent Roman Road redevelopment.

We are proud to say that now when you are at the new Spurs Stadium in London you are not far away from a number of our Armourshield roller shutters on the local retail outlets.
